AMENDMENTS TO THE CLAIMS:

1. (Currently Amended) A mediate software tool applied in a server for access to a SQL (structured query language) database, in which [[a]] the server comprises at least a SQL database and a SQL engine available for a limited number of users' limited persons only for access to the SQL database, and the available capacity will be expanded to permit more people to join this SQL engine after the mediate software tool is executed in the server, in which the mediate software tool comprises comprising:

an access module for building a plurality of SQL instruction accesses on a net between the server and a plurality of client computers, in which the built SQL instruction accesses are usable for transmitting/receiving a SQL instruction and [[the]] a processed result thereof; and

a SQL instruction dispatching/receiving module for dispatching the SQL instructions in the SQL instruction accesses to the SQL engine for processing and receiving the processed result and transmitting the [[same]] processed result to the access module;

wherein the mediate software tool is executed in the server for increasing the number of users that can access the SQL database.

2. (Cancelled).

3. (Currently Amended) The mediate software tool according to claim 1, in which the net is [[the]] Internet.

Serial Nr.: 10/040,559   02102-URSX
Art Unit: 2122

4. (Original) The mediate software tool according to claim 1, in which the net is an

Intranet.

5. (Currently Amended) The mediate software tool according to claim 1, ~~which further~~

~~comprises~~ <u>further comprising</u> a file transmission instruction module for transmitting

files in the client computers and storing the [[same]] <u>files</u> in the server.
